

ONE SHOT

REVISION SERIES

CLASS 10

HISTORY

THE AGE OF INDUSTRIALISATION

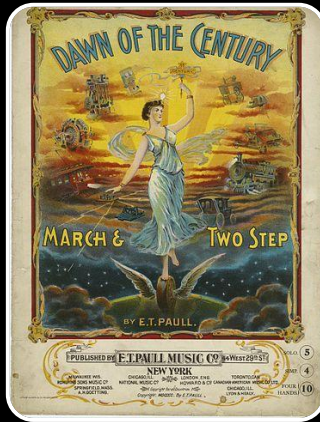

Introduction

What the chapter is all about? 🤔 ➡

Western Perspective

Indian Perspective

Dawn of the Century, published by E.T. Paull Music Co., New York, England, 1900.

Two Magicians, published in Inland Printers, 26 January 1901.

- Association of Modern world with rapid technological change and innovations

Before the Industrial Revolution

Production before the coming up of factory.

Proto – Industrialisation

[This post-industrial system was thus part of a network of commercial exchanges before the coming up of factories. It was controlled by merchants and the goods were produced by a vast number of producers working within their family farms, not in factories].

Merchants moved to countryside ➡ Advances ➡ Production ➡ Sell in International Market

Why 🤔

➤ **Reasons why poor peasants and artisans worked for merchants?**

Disappearing open field ➡ Merchants provided an alternative source of income.

Supplemented their shrinking Income

The Coming up of Factory

Cotton production Boomed 🤨

[2.5 Million pound of raw cotton was imported in 1760 by 1787, its import expanded to 22 Million pound]

Series of invention in production process. ➡ Firsts Cotton mill - **Richard Arkwright**

↓
Countryside to town 🤨

↓
[Manual to Machine]

} **Whole production process came under one roof =** **Factories**

But under the dazzling impact of new mills, people almost forgot the bylanes. 🤨

The Pace of Industrial Change

- 1st** The most dynamic industries were clearly **cotton** and **metals**.
- 2nd** Displacement of traditional industrial was not easy. 🤔
- 3rd** Traditional Industries too had development. They were not stagnant.
- 4nd** Technological changes occurred slowly ➡ **Why** 🤔

- Expensive
- Industrialists were cautious about using it [effectiveness?]

Example - **Steam Engine**

- James Watt [1781]
- Matthew Boulton manufactured new model

Hand Labour and Steam Power

Hand Labour

V/S

Steam Power

Industrialist prefer hand labour over steam power. ➡

Why

- Plenty of Labour
- Seasonal nature of Industry (People look for odd jobs)
- Machines require large capital investment
- Machine produces uniform products only

Countries with labour shortage [America] ➡ Keen on using Machines

Life of the Worker

Migration from countryside ➡ Towns 🤔 ➡ Possibility of Jobs

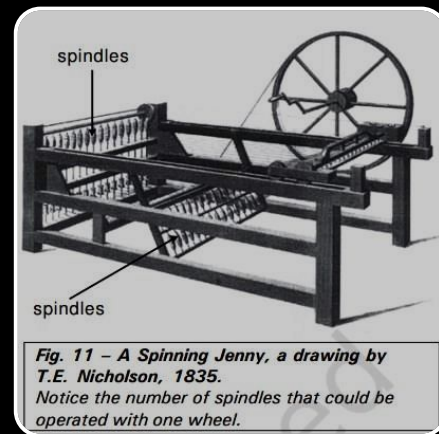

↓
But getting job was not easy
← Problem 🤔

- Network of friendship and kin relations was very important
- Seasonality work (**workers did odd jobs**)
- Wages v/s Real wages
- Population ➡ Unemployment ➡ Proportion of unemployed and poor ↑
- Machines further increased the problems

People became Hostile towards technology ➡ Attacks on **Spinning Jenny**

- Construction work in cities provided relief 🤔

Industrialisation in the Colonies

The Age of Indian Textile

Indian handmade goods dominated International market 🧐 ➡ **Quality, Demand, Network, Transport**

By 1750, the network controlled by Indian merchants was breaking down. 🧐

Coming up of European Companies

- Monopoly rights to trade **X** competition to local Merchants.
- Shifted to new ports, old ports declined. [Bombay and Calcutta]

Trader and Merchants were affected, local bankers went bankrupt.

Impact on weavers and artisans 🧐

What Happened to Weavers?

Initial Phase

Demand of Indian fine textiles

- Difficult for East India Company to ensure regular supply.
- Competition among other European power to gain supplies [EIC had no political power]
- Weavers and Supply merchants were had advantages [Bargaining power]

British East India Company was helpless 🤔

But after gaining political power things changed ➡

How?

After gaining political power, company eliminated competition, controlled cost and ensured regular supplies.

- Asserted monopoly right [Other European buyers were eliminated]
- EIC eliminated existing traders Role of Gomasthas 🤔
- System of advances to prevent weavers from dealing with other buyers, control cost.

Gomasthas **V/S** Indian Merchants

Villages were deserted, many weavers revolt and changed their occupation.

Manchester comes to India = Cotton industries developed in England

Industrialists in Britain demanded import duties and export market for their products.

↓
Impact 🤔 →

Cotton weavers in India faced two problems-their export market collapsed, and the local market shrank as it was glutted with Manchester-made goods.

Supply of raw material ↓ + Factories in India ↑

Factories come up

- First Cotton mill came in Bombay [1854] First Jute mill came up in Bengal [1855]
- Elgin mill in Kanpur [1860's]. A year later, the first cotton mill of Ahmedabad. First weaving and spinning mill of Madras began production by 1834.

Who set up the industries? Where did the capital come from? Who came to work? 🤔

Having earned from trading with China, Indians had vision of developing industrial enterprises in India.

[Dwarkanath Tagore, Parsis like Dinshaw Petit and Jamsetjee Nusserwanjee Tata, Seth Hukumchand and GD Birla were some early entrepreneurs.]

Workers? 🤔

Challenges faced in operation under British rule (European managing agency) 🤔

Where did the Workers Come from?

Need

Where did they come from?

- Districts around industrial regions, peasants and artisans who were unemployed.
E.g. in Bombay from Ratnagiri district

Jobs with the help of jobber

- **Role of jobber**
 - Helps in getting new recruits
 - An old trusted workers
 - A person with authority and power

The Peculiarities of Industrial Growth

Explain

- Different Segment of industrial venture
- European managing agencies v/s Indian Businessmen
- Swadeshi movement gave boost to Indian industries.
- First world war ➡ War ➡ Import from Manchester declined ↓

Indian mills recaptured the home market 🤔

Small scale industries predominate

- How did the handicraft and hand loom production expanded and weavers survived, despite problems?

Technological changes was one reason 🤔

- Huge employment, Handicraft and Hand loom production was exported
- Mills could not imitate specialised weaves.
- Certain groups of weavers were in a better position than others to survive the competition with mill industries.

Market for Goods

- People are persuaded to buy new product. ➡ **How was this done?**
- **Advertisement was one way.**
 - Through newspaper, magazines, Hoardings on street walls, television.
- **Use of label as a mark of quality.**
 - E.g. Made in Manchester.
- **Use of images and illustrations.**
 - Imprinted image of Krishna and Saraswati by foreign manufacturers.
- **Printing of calendars to advertise.**
 - Used even by those who could not read.
- **Figures of Emperor and Nawabs.**
- **Nationalist message through product: Advertisement become a vehicle.**
