

30 CHAPTERWISE IMPORTANT QUESTIONS

Science (086) | CBSE 2026-27

Life Processes

CBSE Science 2026-27 | Board-examinable

30 original revision questions with answers: short-answer, competency, assertion-reason and long-answer practice. Set is based on the current syllabus and official question-paper style; it is not a prediction or an official CBSE paper.

Question 1

How are alveoli suited for gas exchange in humans?

Answer:

Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries. These features allow oxygen and carbon dioxide to diffuse efficiently.

Question 2

Trace the path of food through the human digestive tract and state where most absorption occurs.

Answer:

Food passes through mouth, oesophagus, stomach, small intestine, large intestine, and rectum. Most digested nutrients are absorbed through villi in the small intestine.

Question 3

How do xylem and phloem differ in transport?

Answer:

Xylem carries water and minerals mainly upward from roots. Phloem transports prepared food from leaves to growing or storage parts and can move it in either direction as needed.

Question 4

What is the central idea or skill tested in Life Processes?

Answer:

The central focus is: Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries. This is the starting point for a strong answer from this chapter.

Question 5

Write two relevant points for a short answer based on Life Processes.

Answer:

First point: Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries. Second point: Food passes through mouth, oesophagus, stomach, small intestine, large intestine, and rectum. Link the two points clearly instead of listing them without explanation.

Question 6

How does the first key idea in Life Processes lead to an important result or conclusion?

Answer:

Begin with the key idea: Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries. Then connect it to the result: Food passes through mouth, oesophagus, stomach, small intestine, large intestine, and rectum.

Life Processes - Continued

Question 7

What evidence, calculation, incident or concept best supports the first main idea in Life Processes?

Answer:

Use this supporting detail: Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries. These features allow oxygen and carbon dioxide to diffuse efficiently. The relevant detail should be stated before giving the final conclusion.

Question 8

Explain the importance of the second major idea in Life Processes.

Answer:

Food passes through mouth, oesophagus, stomach, small intestine, large intestine, and rectum. Most digested nutrients are absorbed through villi in the small intestine. Its importance lies in showing how the chapter develops the topic beyond a simple fact or definition.

Question 9

What common mistake should a student avoid while answering a question from Life Processes?

Answer:

Do not give only a conclusion. Explain the reasoning with a correct detail, such as: Xylem carries water and minerals mainly upward from roots.

Question 10

Compare the first and second important ideas in Life Processes.

Answer:

The first idea is: Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries. The second idea is: Food passes through mouth, oesophagus, stomach, small intestine, large intestine, and rectum. A complete comparison states both the difference and the connection between them.

Question 11

Show a cause-and-effect link from Life Processes.

Answer:

Cause or starting point: Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries. Effect or outcome: Food passes through mouth, oesophagus, stomach, small intestine, large intestine, and rectum. Use connecting words such as 'therefore', 'as a result', or 'thus'.

Question 12

What is the most useful sequence for explaining the main content of Life Processes?

Answer:

A clear sequence is: Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries. Next, Food passes through mouth, oesophagus, stomach, small intestine, large intestine, and rectum. Finally, Xylem carries water and minerals mainly upward from roots.

Life Processes - Continued

Question 13

Give a 40-50 word answer outline for an important question from Life Processes.

Answer:

Start with the direct answer: Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries. Add one supporting point: Food passes through mouth, oesophagus, stomach, small intestine, large intestine, and rectum. End with the outcome or message: Xylem carries water and minerals mainly upward from roots.

Question 14

Which scientific observation, equation, diagram, or principle should be written accurately in Life Processes?

Answer:

Use an accurate scientific statement: Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries. Then link it to the observation, process, or result asked in the question.

Question 15

How can an examiner see that you understand, rather than memorise, Life Processes?

Answer:

Connect the idea to its reason or result. For instance: Food passes through mouth, oesophagus, stomach, small intestine, large intestine, and rectum. Then explain why this point matters in the chapter's context.

Question 16

State one inference that can be drawn from the main situation or concept in Life Processes.

Answer:

A sound inference is that xylem carries water and minerals mainly upward from roots. This inference must be supported by a relevant point from the chapter.

Question 17

Frame a short competency-based response using the first two ideas in Life Processes.

Answer:

Apply the concept by first stating: Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries. Then justify the response with: Food passes through mouth, oesophagus, stomach, small intestine, large intestine, and rectum.

Question 18

What would make an answer from Life Processes incomplete?

Answer:

An answer is incomplete if it omits the explanation or final implication. Include both: Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries. Also add: Xylem carries water and minerals mainly upward from roots.

Life Processes - Continued

Question 19

Prepare an Assertion-Reason style explanation based on Life Processes.

Answer:

Assertion: Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries.
Reason: Food passes through mouth, oesophagus, stomach, small intestine, large intestine, and rectum.
Check whether the reason actually explains the assertion before choosing an option.

Question 20

How should you justify an answer from Life Processes in two clear steps?

Answer:

Step 1: state the concept or event - Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries. Step 2: support it with the explanation or result - Food passes through mouth, oesophagus, stomach, small intestine, large intestine, and rectum.

Question 21

What answer structure is suitable for a 3-mark question from Life Processes?

Answer:

Use three connected points: Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries. Food passes through mouth, oesophagus, stomach, small intestine, large intestine, and rectum. Xylem carries water and minerals mainly upward from roots. Keep the points specific and write them in a logical order.

Question 22

What answer structure is suitable for a 5-mark question from Life Processes?

Answer:

Give an introduction, develop these key points - Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries. Food passes through mouth, oesophagus, stomach, small intestine, large intestine, and rectum. - and close with: Xylem carries water and minerals mainly upward from roots. Add a diagram, equation, example, or textual reference where relevant.

Question 23

How can the ideas in Life Processes be applied to a new situation or case study?

Answer:

Identify the relevant principle first: Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries. Then use the chapter's reasoning to explain the case: Food passes through mouth, oesophagus, stomach, small intestine, large intestine, and rectum.

Question 24

Which detail from Life Processes is most likely to earn an extra mark when explained correctly?

Answer:

A useful detail is: Xylem carries water and minerals mainly upward from roots. Explain it in context instead of using it as an isolated statement.

Life Processes - Continued

Question 25

Write a brief concluding statement for an answer on Life Processes.

Answer:

A suitable conclusion is: Xylem carries water and minerals mainly upward from roots. This conclusion should follow naturally from the explanation rather than introduce a new point.

Question 26

Make a three-point revision note for Life Processes.

Answer:

1. Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries. 2. Food passes through mouth, oesophagus, stomach, small intestine, large intestine, and rectum. 3. Xylem carries water and minerals mainly upward from roots. Revise these points with the chapter's examples, terms, and practice questions.

Question 27

How would you self-check an answer from Life Processes before submitting it?

Answer:

Check that you have answered the exact question, used the key idea - Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries. - and supported it with a reason, example, calculation, or outcome such as: Food passes through mouth, oesophagus, stomach, small intestine, large intestine, and rectum.

Question 28

Why does Life Processes remain important for revision?

Answer:

It combines factual recall with explanation and application. The main takeaways are: Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries. Food passes through mouth, oesophagus, stomach, small intestine, large intestine, and rectum. Xylem carries water and minerals mainly upward from roots.

Question 29

Create a final 60-80 word answer plan for a long question from Life Processes.

Answer:

Opening: Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries. Development: Food passes through mouth, oesophagus, stomach, small intestine, large intestine, and rectum. Conclusion: Xylem carries water and minerals mainly upward from roots. Use complete sentences and include all required evidence, steps, or references.

Question 30

What is one last-minute revision question you should ask yourself about Life Processes?

Answer:

Ask: 'Can I explain why this is true or important?' A correct self-answer should include: Alveoli provide a large surface area, have thin moist walls, and are surrounded by capillaries. and Food passes through mouth, oesophagus, stomach, small intestine, large intestine, and rectum.
