

30 CHAPTERWISE IMPORTANT QUESTIONS

Science (086) | CBSE 2026-27

Our Environment

CBSE Science 2026-27 | Board-examinable

30 original revision questions with answers: short-answer, competency, assertion-reason and long-answer practice. Set is based on the current syllabus and official question-paper style; it is not a prediction or an official CBSE paper.

Question 1

Why is energy transfer in a food chain one-directional, and what happens at each trophic level?

Answer:

Energy enters mainly from sunlight, is captured by producers, and passes to consumers. Much is used in life processes or lost as heat at each step, so less energy remains for the next level.

Question 2

Why do non-biodegradable chemicals often become more concentrated at higher trophic levels?

Answer:

They persist in the environment and accumulate in organisms. Predators eat many contaminated prey, so the pollutant concentration can increase up the food chain; this is biomagnification.

Question 3

Give two practical ways to reduce environmental waste and explain them.

Answer:

Reuse durable products and separate recyclable materials to reduce landfill. Composting biodegradable kitchen waste returns nutrients to soil and reduces the amount sent for disposal.

Question 4

What is the central idea or skill tested in Our Environment?

Answer:

The central focus is: Energy enters mainly from sunlight, is captured by producers, and passes to consumers. This is the starting point for a strong answer from this chapter.

Question 5

Write two relevant points for a short answer based on Our Environment.

Answer:

First point: Energy enters mainly from sunlight, is captured by producers, and passes to consumers.

Second point: They persist in the environment and accumulate in organisms. Link the two points clearly instead of listing them without explanation.

Question 6

How does the first key idea in Our Environment lead to an important result or conclusion?

Answer:

Begin with the key idea: Energy enters mainly from sunlight, is captured by producers, and passes to consumers. Then connect it to the result: They persist in the environment and accumulate in organisms.

Our Environment - Continued

Question 7

What evidence, calculation, incident or concept best supports the first main idea in Our Environment?

Answer:

Use this supporting detail: Energy enters mainly from sunlight, is captured by producers, and passes to consumers. Much is used in life processes or lost as heat at each step, so less energy remains for the next level. The relevant detail should be stated before giving the final conclusion.

Question 8

Explain the importance of the second major idea in Our Environment.

Answer:

They persist in the environment and accumulate in organisms. Predators eat many contaminated prey, so the pollutant concentration can increase up the food chain; this is biomagnification. Its importance lies in showing how the chapter develops the topic beyond a simple fact or definition.

Question 9

What common mistake should a student avoid while answering a question from Our Environment?

Answer:

Do not give only a conclusion. Explain the reasoning with a correct detail, such as: Reuse durable products and separate recyclable materials to reduce landfill.

Question 10

Compare the first and second important ideas in Our Environment.

Answer:

The first idea is: Energy enters mainly from sunlight, is captured by producers, and passes to consumers. The second idea is: They persist in the environment and accumulate in organisms. A complete comparison states both the difference and the connection between them.

Question 11

Show a cause-and-effect link from Our Environment.

Answer:

Cause or starting point: Energy enters mainly from sunlight, is captured by producers, and passes to consumers. Effect or outcome: They persist in the environment and accumulate in organisms. Use connecting words such as 'therefore', 'as a result', or 'thus'.

Question 12

What is the most useful sequence for explaining the main content of Our Environment?

Answer:

A clear sequence is: Energy enters mainly from sunlight, is captured by producers, and passes to consumers. Next, They persist in the environment and accumulate in organisms. Finally, Reuse durable products and separate recyclable materials to reduce landfill.

Our Environment - Continued

Question 13

Give a 40-50 word answer outline for an important question from Our Environment.

Answer:

Start with the direct answer: Energy enters mainly from sunlight, is captured by producers, and passes to consumers. Add one supporting point: They persist in the environment and accumulate in organisms. End with the outcome or message: Reuse durable products and separate recyclable materials to reduce landfill.

Question 14

Which scientific observation, equation, diagram, or principle should be written accurately in Our Environment?

Answer:

Use an accurate scientific statement: Energy enters mainly from sunlight, is captured by producers, and passes to consumers. Then link it to the observation, process, or result asked in the question.

Question 15

How can an examiner see that you understand, rather than memorise, Our Environment?

Answer:

Connect the idea to its reason or result. For instance: They persist in the environment and accumulate in organisms. Then explain why this point matters in the chapter's context.

Question 16

State one inference that can be drawn from the main situation or concept in Our Environment.

Answer:

A sound inference is that reuse durable products and separate recyclable materials to reduce landfill. This inference must be supported by a relevant point from the chapter.

Question 17

Frame a short competency-based response using the first two ideas in Our Environment.

Answer:

Apply the concept by first stating: Energy enters mainly from sunlight, is captured by producers, and passes to consumers. Then justify the response with: They persist in the environment and accumulate in organisms.

Question 18

What would make an answer from Our Environment incomplete?

Answer:

An answer is incomplete if it omits the explanation or final implication. Include both: Energy enters mainly from sunlight, is captured by producers, and passes to consumers. Also add: Reuse durable products and separate recyclable materials to reduce landfill.

Question 19

Prepare an Assertion-Reason style explanation based on Our Environment.

Answer:

Assertion: Energy enters mainly from sunlight, is captured by producers, and passes to consumers.
Reason: They persist in the environment and accumulate in organisms. Check whether the reason actually explains the assertion before choosing an option.

Our Environment - Continued

Question 20

How should you justify an answer from Our Environment in two clear steps?

Answer:

Step 1: state the concept or event - Energy enters mainly from sunlight, is captured by producers, and passes to consumers. Step 2: support it with the explanation or result - They persist in the environment and accumulate in organisms.

Question 21

What answer structure is suitable for a 3-mark question from Our Environment?

Answer:

Use three connected points: Energy enters mainly from sunlight, is captured by producers, and passes to consumers. They persist in the environment and accumulate in organisms. Reuse durable products and separate recyclable materials to reduce landfill. Keep the points specific and write them in a logical order.

Question 22

What answer structure is suitable for a 5-mark question from Our Environment?

Answer:

Give an introduction, develop these key points - Energy enters mainly from sunlight, is captured by producers, and passes to consumers. They persist in the environment and accumulate in organisms. - and close with: Reuse durable products and separate recyclable materials to reduce landfill. Add a diagram, equation, example, or textual reference where relevant.

Question 23

How can the ideas in Our Environment be applied to a new situation or case study?

Answer:

Identify the relevant principle first: Energy enters mainly from sunlight, is captured by producers, and passes to consumers. Then use the chapter's reasoning to explain the case: They persist in the environment and accumulate in organisms.

Question 24

Which detail from Our Environment is most likely to earn an extra mark when explained correctly?

Answer:

A useful detail is: Reuse durable products and separate recyclable materials to reduce landfill. Explain it in context instead of using it as an isolated statement.

Question 25

Write a brief concluding statement for an answer on Our Environment.

Answer:

A suitable conclusion is: Reuse durable products and separate recyclable materials to reduce landfill. This conclusion should follow naturally from the explanation rather than introduce a new point.

Our Environment - Continued

Question 26

Make a three-point revision note for Our Environment.

Answer:

1. Energy enters mainly from sunlight, is captured by producers, and passes to consumers. 2. They persist in the environment and accumulate in organisms. 3. Reuse durable products and separate recyclable materials to reduce landfill. Revise these points with the chapter's examples, terms, and practice questions.

Question 27

How would you self-check an answer from Our Environment before submitting it?

Answer:

Check that you have answered the exact question, used the key idea - Energy enters mainly from sunlight, is captured by producers, and passes to consumers. - and supported it with a reason, example, calculation, or outcome such as: They persist in the environment and accumulate in organisms.

Question 28

Why does Our Environment remain important for revision?

Answer:

It combines factual recall with explanation and application. The main takeaways are: Energy enters mainly from sunlight, is captured by producers, and passes to consumers. They persist in the environment and accumulate in organisms. Reuse durable products and separate recyclable materials to reduce landfill.

Question 29

Create a final 60-80 word answer plan for a long question from Our Environment.

Answer:

Opening: Energy enters mainly from sunlight, is captured by producers, and passes to consumers. Development: They persist in the environment and accumulate in organisms. Conclusion: Reuse durable products and separate recyclable materials to reduce landfill. Use complete sentences and include all required evidence, steps, or references.

Question 30

What is one last-minute revision question you should ask yourself about Our Environment?

Answer:

Ask: 'Can I explain why this is true or important?' A correct self-answer should include: Energy enters mainly from sunlight, is captured by producers, and passes to consumers. and They persist in the environment and accumulate in organisms.
