

# 30 CHAPTERWISE IMPORTANT QUESTIONS

Social Science (087) | CBSE 2026-27

## Agriculture

Geography | Board-examinable

30 original revision questions with answers: short-answer, competency, assertion-reason and long-answer practice. Set is based on the current syllabus and official question-paper style; it is not a prediction or an official CBSE paper.

### Question 1

**How do the kharif and rabi cropping seasons differ?**

Answer:

Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. Their water and temperature needs differ.

### Question 2

**Why is Indian agriculture vulnerable to more than one kind of risk?**

Answer:

Many farms depend on rainfall and small landholdings, while farmers also face price changes, input costs, pests, and limited storage. These risks can affect both yield and income.

### Question 3

**Suggest measures that can make farming more sustainable.**

Answer:

Efficient irrigation, crop rotation, soil testing, balanced fertiliser use, and agroforestry can conserve resources. Better storage and market access can also reduce post-harvest losses and income uncertainty.

### Question 4

**What is the central idea or skill tested in Agriculture?**

Answer:

The central focus is: Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. This is the starting point for a strong answer from this chapter.

### Question 5

**Write two relevant points for a short answer based on Agriculture.**

Answer:

First point: Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. Second point: Many farms depend on rainfall and small landholdings, while farmers also face price changes, input costs, pests, and limited storage. Link the two points clearly instead of listing them without explanation.

### Question 6

**How does the first key idea in Agriculture lead to an important result or conclusion?**

Answer:

Begin with the key idea: Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. Then connect it to the result: Many farms depend on rainfall and small landholdings, while farmers also face price changes, input costs, pests, and limited storage.

## Agriculture - Continued

### Question 7

**What evidence, calculation, incident or concept best supports the first main idea in Agriculture?**

Answer:

Use this supporting detail: Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. Their water and temperature needs differ. The relevant detail should be stated before giving the final conclusion.

### Question 8

**Explain the importance of the second major idea in Agriculture.**

Answer:

Many farms depend on rainfall and small landholdings, while farmers also face price changes, input costs, pests, and limited storage. These risks can affect both yield and income. Its importance lies in showing how the chapter develops the topic beyond a simple fact or definition.

### Question 9

**What common mistake should a student avoid while answering a question from Agriculture?**

Answer:

Do not give only a conclusion. Explain the reasoning with a correct detail, such as: Efficient irrigation, crop rotation, soil testing, balanced fertiliser use, and agroforestry can conserve resources.

### Question 10

**Compare the first and second important ideas in Agriculture.**

Answer:

The first idea is: Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. The second idea is: Many farms depend on rainfall and small landholdings, while farmers also face price changes, input costs, pests, and limited storage. A complete comparison states both the difference and the connection between them.

### Question 11

**Show a cause-and-effect link from Agriculture.**

Answer:

Cause or starting point: Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. Effect or outcome: Many farms depend on rainfall and small landholdings, while farmers also face price changes, input costs, pests, and limited storage. Use connecting words such as 'therefore', 'as a result', or 'thus'.

### Question 12

**What is the most useful sequence for explaining the main content of Agriculture?**

Answer:

A clear sequence is: Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. Next, Many farms depend on rainfall and small landholdings, while farmers also face price changes, input costs, pests, and limited storage. Finally, Efficient irrigation, crop rotation, soil testing, balanced fertiliser use, and agroforestry can conserve resources.

## Agriculture - Continued

### Question 13

**Give a 40-50 word answer outline for an important question from Agriculture.**

Answer:

Start with the direct answer: Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. Add one supporting point: Many farms depend on rainfall and small landholdings, while farmers also face price changes, input costs, pests, and limited storage. End with the outcome or message: Efficient irrigation, crop rotation, soil testing, balanced fertiliser use, and agroforestry can conserve resources.

### Question 14

**How should you support an answer from Agriculture with a relevant example or fact?**

Answer:

Use a precise example or explanation: Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. State the fact, then explain its significance rather than leaving it as a name or date alone.

### Question 15

**How can an examiner see that you understand, rather than memorise, Agriculture?**

Answer:

Connect the idea to its reason or result. For instance: Many farms depend on rainfall and small landholdings, while farmers also face price changes, input costs, pests, and limited storage. Then explain why this point matters in the chapter's context.

### Question 16

**State one inference that can be drawn from the main situation or concept in Agriculture.**

Answer:

A sound inference is that efficient irrigation, crop rotation, soil testing, balanced fertiliser use, and agroforestry can conserve resources. This inference must be supported by a relevant point from the chapter.

### Question 17

**Frame a short competency-based response using the first two ideas in Agriculture.**

Answer:

Apply the concept by first stating: Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. Then justify the response with: Many farms depend on rainfall and small landholdings, while farmers also face price changes, input costs, pests, and limited storage.

### Question 18

**What would make an answer from Agriculture incomplete?**

Answer:

An answer is incomplete if it omits the explanation or final implication. Include both: Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. Also add: Efficient irrigation, crop rotation, soil testing, balanced fertiliser use, and agroforestry can conserve resources.

## Agriculture - Continued

### Question 19

**Prepare an Assertion-Reason style explanation based on Agriculture.**

Answer:

Assertion: Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. Reason: Many farms depend on rainfall and small landholdings, while farmers also face price changes, input costs, pests, and limited storage. Check whether the reason actually explains the assertion before choosing an option.

### Question 20

**How should you justify an answer from Agriculture in two clear steps?**

Answer:

Step 1: state the concept or event - Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. Step 2: support it with the explanation or result - Many farms depend on rainfall and small landholdings, while farmers also face price changes, input costs, pests, and limited storage.

### Question 21

**What answer structure is suitable for a 3-mark question from Agriculture?**

Answer:

Use three connected points: Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. Many farms depend on rainfall and small landholdings, while farmers also face price changes, input costs, pests, and limited storage. Efficient irrigation, crop rotation, soil testing, balanced fertiliser use, and agroforestry can conserve resources. Keep the points specific and write them in a logical order.

### Question 22

**What answer structure is suitable for a 5-mark question from Agriculture?**

Answer:

Give an introduction, develop these key points - Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. Many farms depend on rainfall and small landholdings, while farmers also face price changes, input costs, pests, and limited storage. - and close with: Efficient irrigation, crop rotation, soil testing, balanced fertiliser use, and agroforestry can conserve resources. Add a diagram, equation, example, or textual reference where relevant.

### Question 23

**How can the ideas in Agriculture be applied to a new situation or case study?**

Answer:

Identify the relevant principle first: Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. Then use the chapter's reasoning to explain the case: Many farms depend on rainfall and small landholdings, while farmers also face price changes, input costs, pests, and limited storage.

## Agriculture - Continued

### Question 24

**Which detail from Agriculture is most likely to earn an extra mark when explained correctly?**

Answer:

A useful detail is: Efficient irrigation, crop rotation, soil testing, balanced fertiliser use, and agroforestry can conserve resources. Explain it in context instead of using it as an isolated statement.

### Question 25

**Write a brief concluding statement for an answer on Agriculture.**

Answer:

A suitable conclusion is: Efficient irrigation, crop rotation, soil testing, balanced fertiliser use, and agroforestry can conserve resources. This conclusion should follow naturally from the explanation rather than introduce a new point.

### Question 26

**Make a three-point revision note for Agriculture.**

Answer:

1. Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. 2. Many farms depend on rainfall and small landholdings, while farmers also face price changes, input costs, pests, and limited storage. 3. Efficient irrigation, crop rotation, soil testing, balanced fertiliser use, and agroforestry can conserve resources. Revise these points with the chapter's examples, terms, and practice questions.

### Question 27

**How would you self-check an answer from Agriculture before submitting it?**

Answer:

Check that you have answered the exact question, used the key idea - Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. - and supported it with a reason, example, calculation, or outcome such as: Many farms depend on rainfall and small landholdings, while farmers also face price changes, input costs, pests, and limited storage.

### Question 28

**Why does Agriculture remain important for revision?**

Answer:

It combines factual recall with explanation and application. The main takeaways are: Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. Many farms depend on rainfall and small landholdings, while farmers also face price changes, input costs, pests, and limited storage. Efficient irrigation, crop rotation, soil testing, balanced fertiliser use, and agroforestry can conserve resources.

## Agriculture - Continued

### Question 29

**Create a final 60-80 word answer plan for a long question from Agriculture.**

Answer:

Opening: Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. Development: Many farms depend on rainfall and small landholdings, while farmers also face price changes, input costs, pests, and limited storage. Conclusion: Efficient irrigation, crop rotation, soil testing, balanced fertiliser use, and agroforestry can conserve resources. Use complete sentences and include all required evidence, steps, or references.

### Question 30

**What is one last-minute revision question you should ask yourself about Agriculture?**

Answer:

Ask: 'Can I explain why this is true or important?' A correct self-answer should include: Kharif crops are generally sown with the monsoon and harvested in autumn, while rabi crops are sown in winter and harvested in spring. and Many farms depend on rainfall and small landholdings, while farmers also face price changes, input costs, pests, and limited storage.
