

30 CHAPTERWISE IMPORTANT QUESTIONS

Social Science (087) | CBSE 2026-27

Forest and Wildlife Resources

Geography | Board-examinable

30 original revision questions with answers: short-answer, competency, assertion-reason and long-answer practice. Set is based on the current syllabus and official question-paper style; it is not a prediction or an official CBSE paper.

Question 1

Why is biodiversity conservation important beyond protecting individual species?

Answer:

Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. Protecting biodiversity helps ecosystems remain resilient and supports human livelihoods.

Question 2

How can local communities help conserve forests and wildlife?

Answer:

Communities can protect habitats, regulate resource use, and monitor illegal activity. Sacred groves and joint forest management show how local knowledge and participation can support conservation.

Question 3

Distinguish reserved, protected, and unclassed forests in broad terms.

Answer:

Reserved forests receive the strongest legal protection; protected forests have regulated use; unclassed forests may be under government, community, or private control depending on the state. Exact rights vary by category and law.

Question 4

What is the central idea or skill tested in Forest and Wildlife Resources?

Answer:

The central focus is: Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. This is the starting point for a strong answer from this chapter.

Question 5

Write two relevant points for a short answer based on Forest and Wildlife Resources.

Answer:

First point: Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. Second point: Communities can protect habitats, regulate resource use, and monitor illegal activity. Link the two points clearly instead of listing them without explanation.

Question 6

How does the first key idea in Forest and Wildlife Resources lead to an important result or conclusion?

Answer:

Begin with the key idea: Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. Then connect it to the result: Communities can protect habitats, regulate resource use, and monitor illegal activity.

Forest and Wildlife Resources - Continued

Question 7

What evidence, calculation, incident or concept best supports the first main idea in Forest and Wildlife Resources?

Answer:

Use this supporting detail: Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. Protecting biodiversity helps ecosystems remain resilient and supports human livelihoods. The relevant detail should be stated before giving the final conclusion.

Question 8

Explain the importance of the second major idea in Forest and Wildlife Resources.

Answer:

Communities can protect habitats, regulate resource use, and monitor illegal activity. Sacred groves and joint forest management show how local knowledge and participation can support conservation. Its importance lies in showing how the chapter develops the topic beyond a simple fact or definition.

Question 9

What common mistake should a student avoid while answering a question from Forest and Wildlife Resources?

Answer:

Do not give only a conclusion. Explain the reasoning with a correct detail, such as: Reserved forests receive the strongest legal protection; protected forests have regulated use; unclassified forests may be under government, community, or private control depending on the state.

Question 10

Compare the first and second important ideas in Forest and Wildlife Resources.

Answer:

The first idea is: Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. The second idea is: Communities can protect habitats, regulate resource use, and monitor illegal activity. A complete comparison states both the difference and the connection between them.

Question 11

Show a cause-and-effect link from Forest and Wildlife Resources.

Answer:

Cause or starting point: Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. Effect or outcome: Communities can protect habitats, regulate resource use, and monitor illegal activity. Use connecting words such as 'therefore', 'as a result', or 'thus'.

Question 12

What is the most useful sequence for explaining the main content of Forest and Wildlife Resources?

Answer:

A clear sequence is: Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. Next, Communities can protect habitats, regulate resource use, and monitor illegal activity. Finally, Reserved forests receive the strongest legal protection; protected forests have regulated use; unclassified forests may be under government, community, or private control depending on the state.

Forest and Wildlife Resources - Continued

Question 13

Give a 40-50 word answer outline for an important question from Forest and Wildlife Resources.

Answer:

Start with the direct answer: Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. Add one supporting point: Communities can protect habitats, regulate resource use, and monitor illegal activity. End with the outcome or message: Reserved forests receive the strongest legal protection; protected forests have regulated use; unclassified forests may be under government, community, or private control depending on the state.

Question 14

How should you support an answer from Forest and Wildlife Resources with a relevant example or fact?

Answer:

Use a precise example or explanation: Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. State the fact, then explain its significance rather than leaving it as a name or date alone.

Question 15

How can an examiner see that you understand, rather than memorise, Forest and Wildlife Resources?

Answer:

Connect the idea to its reason or result. For instance: Communities can protect habitats, regulate resource use, and monitor illegal activity. Then explain why this point matters in the chapter's context.

Question 16

State one inference that can be drawn from the main situation or concept in Forest and Wildlife Resources.

Answer:

A sound inference is that reserved forests receive the strongest legal protection; protected forests have regulated use; unclassified forests may be under government, community, or private control depending on the state. This inference must be supported by a relevant point from the chapter.

Question 17

Frame a short competency-based response using the first two ideas in Forest and Wildlife Resources.

Answer:

Apply the concept by first stating: Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. Then justify the response with: Communities can protect habitats, regulate resource use, and monitor illegal activity.

Forest and Wildlife Resources - Continued

Question 18

What would make an answer from Forest and Wildlife Resources incomplete?

Answer:

An answer is incomplete if it omits the explanation or final implication. Include both: Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. Also add: Reserved forests receive the strongest legal protection; protected forests have regulated use; unclassified forests may be under government, community, or private control depending on the state.

Question 19

Prepare an Assertion-Reason style explanation based on Forest and Wildlife Resources.

Answer:

Assertion: Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. Reason: Communities can protect habitats, regulate resource use, and monitor illegal activity. Check whether the reason actually explains the assertion before choosing an option.

Question 20

How should you justify an answer from Forest and Wildlife Resources in two clear steps?

Answer:

Step 1: state the concept or event - Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. Step 2: support it with the explanation or result - Communities can protect habitats, regulate resource use, and monitor illegal activity.

Question 21

What answer structure is suitable for a 3-mark question from Forest and Wildlife Resources?

Answer:

Use three connected points: Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. Communities can protect habitats, regulate resource use, and monitor illegal activity. Reserved forests receive the strongest legal protection; protected forests have regulated use; unclassified forests may be under government, community, or private control depending on the state. Keep the points specific and write them in a logical order.

Question 22

What answer structure is suitable for a 5-mark question from Forest and Wildlife Resources?

Answer:

Give an introduction, develop these key points - Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. Communities can protect habitats, regulate resource use, and monitor illegal activity. - and close with: Reserved forests receive the strongest legal protection; protected forests have regulated use; unclassified forests may be under government, community, or private control depending on the state. Add a diagram, equation, example, or textual reference where relevant.

Question 23

How can the ideas in Forest and Wildlife Resources be applied to a new situation or case study?

Answer:

Identify the relevant principle first: Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. Then use the chapter's reasoning to explain the case: Communities can protect habitats, regulate resource use, and monitor illegal activity.

Question 24

Which detail from Forest and Wildlife Resources is most likely to earn an extra mark when explained correctly?

Answer:

A useful detail is: Reserved forests receive the strongest legal protection; protected forests have regulated use; unclassified forests may be under government, community, or private control depending on the state. Explain it in context instead of using it as an isolated statement.

Question 25

Write a brief concluding statement for an answer on Forest and Wildlife Resources.

Answer:

A suitable conclusion is: Reserved forests receive the strongest legal protection; protected forests have regulated use; unclassified forests may be under government, community, or private control depending on the state. This conclusion should follow naturally from the explanation rather than introduce a new point.

Question 26

Make a three-point revision note for Forest and Wildlife Resources.

Answer:

1. Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. 2. Communities can protect habitats, regulate resource use, and monitor illegal activity. 3. Reserved forests receive the strongest legal protection; protected forests have regulated use; unclassified forests may be under government, community, or private control depending on the state. Revise these points with the chapter's examples, terms, and practice questions.

Question 27

How would you self-check an answer from Forest and Wildlife Resources before submitting it?

Answer:

Check that you have answered the exact question, used the key idea - Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. - and supported it with a reason, example, calculation, or outcome such as: Communities can protect habitats, regulate resource use, and monitor illegal activity.

Forest and Wildlife Resources - Continued

Question 28

Why does Forest and Wildlife Resources remain important for revision?

Answer:

It combines factual recall with explanation and application. The main takeaways are: Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. Communities can protect habitats, regulate resource use, and monitor illegal activity. Reserved forests receive the strongest legal protection; protected forests have regulated use; unclassified forests may be under government, community, or private control depending on the state.

Question 29

Create a final 60-80 word answer plan for a long question from Forest and Wildlife Resources.

Answer:

Opening: Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. Development: Communities can protect habitats, regulate resource use, and monitor illegal activity. Conclusion: Reserved forests receive the strongest legal protection; protected forests have regulated use; unclassified forests may be under government, community, or private control depending on the state. Use complete sentences and include all required evidence, steps, or references.

Question 30

What is one last-minute revision question you should ask yourself about Forest and Wildlife Resources?

Answer:

Ask: 'Can I explain why this is true or important?' A correct self-answer should include: Species depend on one another and support ecosystem functions such as pollination, soil health, and water cycles. and Communities can protect habitats, regulate resource use, and monitor illegal activity.
