

30 CHAPTERWISE IMPORTANT QUESTIONS

Social Science (087) | CBSE 2026-27

Minerals and Energy Resources

Geography | Board-examinable

30 original revision questions with answers: short-answer, competency, assertion-reason and long-answer practice. Set is based on the current syllabus and official question-paper style; it is not a prediction or an official CBSE paper.

Question 1

Why are minerals unevenly distributed, and why should they be conserved?

Answer:

Minerals form through geological processes that vary by place. Many are finite and take millions of years to form, so careful use, recycling, and efficient technology help preserve them.

Question 2

Compare conventional and non-conventional energy sources with examples.

Answer:

Coal and petroleum are conventional sources that have long been widely used and cause pollution. Solar and wind are non-conventional renewables with lower operating emissions but depend on location and storage.

Question 3

State two environmental impacts of mining and one way to reduce each.

Answer:

Mining can remove vegetation and contaminate water. Reclaiming mined land with native plants and treating mine water before release can reduce these impacts.

Question 4

What is the central idea or skill tested in Minerals and Energy Resources?

Answer:

The central focus is: Minerals form through geological processes that vary by place. This is the starting point for a strong answer from this chapter.

Question 5

Write two relevant points for a short answer based on Minerals and Energy Resources.

Answer:

First point: Minerals form through geological processes that vary by place. Second point: Coal and petroleum are conventional sources that have long been widely used and cause pollution. Link the two points clearly instead of listing them without explanation.

Question 6

How does the first key idea in Minerals and Energy Resources lead to an important result or conclusion?

Answer:

Begin with the key idea: Minerals form through geological processes that vary by place. Then connect it to the result: Coal and petroleum are conventional sources that have long been widely used and cause pollution.

Minerals and Energy Resources - Continued

Question 7

What evidence, calculation, incident or concept best supports the first main idea in Minerals and Energy Resources?

Answer:

Use this supporting detail: Minerals form through geological processes that vary by place. Many are finite and take millions of years to form, so careful use, recycling, and efficient technology help preserve them. The relevant detail should be stated before giving the final conclusion.

Question 8

Explain the importance of the second major idea in Minerals and Energy Resources.

Answer:

Coal and petroleum are conventional sources that have long been widely used and cause pollution. Solar and wind are non-conventional renewables with lower operating emissions but depend on location and storage. Its importance lies in showing how the chapter develops the topic beyond a simple fact or definition.

Question 9

What common mistake should a student avoid while answering a question from Minerals and Energy Resources?

Answer:

Do not give only a conclusion. Explain the reasoning with a correct detail, such as: Mining can remove vegetation and contaminate water.

Question 10

Compare the first and second important ideas in Minerals and Energy Resources.

Answer:

The first idea is: Minerals form through geological processes that vary by place. The second idea is: Coal and petroleum are conventional sources that have long been widely used and cause pollution. A complete comparison states both the difference and the connection between them.

Question 11

Show a cause-and-effect link from Minerals and Energy Resources.

Answer:

Cause or starting point: Minerals form through geological processes that vary by place. Effect or outcome: Coal and petroleum are conventional sources that have long been widely used and cause pollution. Use connecting words such as 'therefore', 'as a result', or 'thus'.

Question 12

What is the most useful sequence for explaining the main content of Minerals and Energy Resources?

Answer:

A clear sequence is: Minerals form through geological processes that vary by place. Next, Coal and petroleum are conventional sources that have long been widely used and cause pollution. Finally, Mining can remove vegetation and contaminate water.

Minerals and Energy Resources - Continued

Question 13

Give a 40-50 word answer outline for an important question from Minerals and Energy Resources.

Answer:

Start with the direct answer: Minerals form through geological processes that vary by place. Add one supporting point: Coal and petroleum are conventional sources that have long been widely used and cause pollution. End with the outcome or message: Mining can remove vegetation and contaminate water.

Question 14

How should you support an answer from Minerals and Energy Resources with a relevant example or fact?

Answer:

Use a precise example or explanation: Minerals form through geological processes that vary by place. State the fact, then explain its significance rather than leaving it as a name or date alone.

Question 15

How can an examiner see that you understand, rather than memorise, Minerals and Energy Resources?

Answer:

Connect the idea to its reason or result. For instance: Coal and petroleum are conventional sources that have long been widely used and cause pollution. Then explain why this point matters in the chapter's context.

Question 16

State one inference that can be drawn from the main situation or concept in Minerals and Energy Resources.

Answer:

A sound inference is that mining can remove vegetation and contaminate water. This inference must be supported by a relevant point from the chapter.

Question 17

Frame a short competency-based response using the first two ideas in Minerals and Energy Resources.

Answer:

Apply the concept by first stating: Minerals form through geological processes that vary by place. Then justify the response with: Coal and petroleum are conventional sources that have long been widely used and cause pollution.

Question 18

What would make an answer from Minerals and Energy Resources incomplete?

Answer:

An answer is incomplete if it omits the explanation or final implication. Include both: Minerals form through geological processes that vary by place. Also add: Mining can remove vegetation and contaminate water.

Minerals and Energy Resources - Continued

Question 19

Prepare an Assertion-Reason style explanation based on Minerals and Energy Resources.

Answer:

Assertion: Minerals form through geological processes that vary by place. Reason: Coal and petroleum are conventional sources that have long been widely used and cause pollution. Check whether the reason actually explains the assertion before choosing an option.

Question 20

How should you justify an answer from Minerals and Energy Resources in two clear steps?

Answer:

Step 1: state the concept or event - Minerals form through geological processes that vary by place. Step 2: support it with the explanation or result - Coal and petroleum are conventional sources that have long been widely used and cause pollution.

Question 21

What answer structure is suitable for a 3-mark question from Minerals and Energy Resources?

Answer:

Use three connected points: Minerals form through geological processes that vary by place. Coal and petroleum are conventional sources that have long been widely used and cause pollution. Mining can remove vegetation and contaminate water. Keep the points specific and write them in a logical order.

Question 22

What answer structure is suitable for a 5-mark question from Minerals and Energy Resources?

Answer:

Give an introduction, develop these key points - Minerals form through geological processes that vary by place. Coal and petroleum are conventional sources that have long been widely used and cause pollution. - and close with: Mining can remove vegetation and contaminate water. Add a diagram, equation, example, or textual reference where relevant.

Question 23

How can the ideas in Minerals and Energy Resources be applied to a new situation or case study?

Answer:

Identify the relevant principle first: Minerals form through geological processes that vary by place. Then use the chapter's reasoning to explain the case: Coal and petroleum are conventional sources that have long been widely used and cause pollution.

Minerals and Energy Resources - Continued

Question 24

Which detail from Minerals and Energy Resources is most likely to earn an extra mark when explained correctly?

Answer:

A useful detail is: Mining can remove vegetation and contaminate water. Explain it in context instead of using it as an isolated statement.

Question 25

Write a brief concluding statement for an answer on Minerals and Energy Resources.

Answer:

A suitable conclusion is: Mining can remove vegetation and contaminate water. This conclusion should follow naturally from the explanation rather than introduce a new point.

Question 26

Make a three-point revision note for Minerals and Energy Resources.

Answer:

1. Minerals form through geological processes that vary by place. 2. Coal and petroleum are conventional sources that have long been widely used and cause pollution. 3. Mining can remove vegetation and contaminate water. Revise these points with the chapter's examples, terms, and practice questions.

Question 27

How would you self-check an answer from Minerals and Energy Resources before submitting it?

Answer:

Check that you have answered the exact question, used the key idea - Minerals form through geological processes that vary by place. - and supported it with a reason, example, calculation, or outcome such as: Coal and petroleum are conventional sources that have long been widely used and cause pollution.

Question 28

Why does Minerals and Energy Resources remain important for revision?

Answer:

It combines factual recall with explanation and application. The main takeaways are: Minerals form through geological processes that vary by place. Coal and petroleum are conventional sources that have long been widely used and cause pollution. Mining can remove vegetation and contaminate water.

Question 29

Create a final 60-80 word answer plan for a long question from Minerals and Energy Resources.

Answer:

Opening: Minerals form through geological processes that vary by place. Development: Coal and petroleum are conventional sources that have long been widely used and cause pollution. Conclusion: Mining can remove vegetation and contaminate water. Use complete sentences and include all required evidence, steps, or references.

Question 30

What is one last-minute revision question you should ask yourself about Minerals and Energy Resources?

Answer:

Ask: 'Can I explain why this is true or important?' A correct self-answer should include: Minerals form through geological processes that vary by place. and Coal and petroleum are conventional sources that have long been widely used and cause pollution.
