

30 CHAPTERWISE IMPORTANT QUESTIONS

Social Science (087) | CBSE 2026-27

Resources and Development

Geography | Board-examinable

30 original revision questions with answers: short-answer, competency, assertion-reason and long-answer practice. Set is based on the current syllabus and official question-paper style; it is not a prediction or an official CBSE paper.

Question 1

Why is resource planning important for India?

Answer:

Resources are unevenly distributed and can be depleted or damaged by overuse. Planning helps assess what exists, match development to local needs, and use resources more equitably and sustainably.

Question 2

Name the main factors that cause land degradation and suggest remedies.

Answer:

Deforestation, overgrazing, mining, and excessive irrigation can degrade land. Afforestation, controlled grazing, proper irrigation, and restoring mined areas help protect soil and land quality.

Question 3

How can soil erosion be reduced on slopes and in dry regions?

Answer:

Terrace farming and contour ploughing slow water runoff on slopes. Shelter belts and planting vegetation reduce wind erosion in dry areas.

Question 4

What is the central idea or skill tested in Resources and Development?

Answer:

The central focus is: Resources are unevenly distributed and can be depleted or damaged by overuse. This is the starting point for a strong answer from this chapter.

Question 5

Write two relevant points for a short answer based on Resources and Development.

Answer:

First point: Resources are unevenly distributed and can be depleted or damaged by overuse. Second point: Deforestation, overgrazing, mining, and excessive irrigation can degrade land. Link the two points clearly instead of listing them without explanation.

Question 6

How does the first key idea in Resources and Development lead to an important result or conclusion?

Answer:

Begin with the key idea: Resources are unevenly distributed and can be depleted or damaged by overuse. Then connect it to the result: Deforestation, overgrazing, mining, and excessive irrigation can degrade land.

Resources and Development - Continued

Question 7

What evidence, calculation, incident or concept best supports the first main idea in Resources and Development?

Answer:

Use this supporting detail: Resources are unevenly distributed and can be depleted or damaged by overuse. Planning helps assess what exists, match development to local needs, and use resources more equitably and sustainably. The relevant detail should be stated before giving the final conclusion.

Question 8

Explain the importance of the second major idea in Resources and Development.

Answer:

Deforestation, overgrazing, mining, and excessive irrigation can degrade land. Afforestation, controlled grazing, proper irrigation, and restoring mined areas help protect soil and land quality. Its importance lies in showing how the chapter develops the topic beyond a simple fact or definition.

Question 9

What common mistake should a student avoid while answering a question from Resources and Development?

Answer:

Do not give only a conclusion. Explain the reasoning with a correct detail, such as: Terrace farming and contour ploughing slow water runoff on slopes.

Question 10

Compare the first and second important ideas in Resources and Development.

Answer:

The first idea is: Resources are unevenly distributed and can be depleted or damaged by overuse. The second idea is: Deforestation, overgrazing, mining, and excessive irrigation can degrade land. A complete comparison states both the difference and the connection between them.

Question 11

Show a cause-and-effect link from Resources and Development.

Answer:

Cause or starting point: Resources are unevenly distributed and can be depleted or damaged by overuse. Effect or outcome: Deforestation, overgrazing, mining, and excessive irrigation can degrade land. Use connecting words such as 'therefore', 'as a result', or 'thus'.

Question 12

What is the most useful sequence for explaining the main content of Resources and Development?

Answer:

A clear sequence is: Resources are unevenly distributed and can be depleted or damaged by overuse. Next, Deforestation, overgrazing, mining, and excessive irrigation can degrade land. Finally, Terrace farming and contour ploughing slow water runoff on slopes.

Resources and Development - Continued

Question 13

Give a 40-50 word answer outline for an important question from Resources and Development.

Answer:

Start with the direct answer: Resources are unevenly distributed and can be depleted or damaged by overuse. Add one supporting point: Deforestation, overgrazing, mining, and excessive irrigation can degrade land. End with the outcome or message: Terrace farming and contour ploughing slow water runoff on slopes.

Question 14

How should you support an answer from Resources and Development with a relevant example or fact?

Answer:

Use a precise example or explanation: Resources are unevenly distributed and can be depleted or damaged by overuse. State the fact, then explain its significance rather than leaving it as a name or date alone.

Question 15

How can an examiner see that you understand, rather than memorise, Resources and Development?

Answer:

Connect the idea to its reason or result. For instance: Deforestation, overgrazing, mining, and excessive irrigation can degrade land. Then explain why this point matters in the chapter's context.

Question 16

State one inference that can be drawn from the main situation or concept in Resources and Development.

Answer:

A sound inference is that terrace farming and contour ploughing slow water runoff on slopes. This inference must be supported by a relevant point from the chapter.

Question 17

Frame a short competency-based response using the first two ideas in Resources and Development.

Answer:

Apply the concept by first stating: Resources are unevenly distributed and can be depleted or damaged by overuse. Then justify the response with: Deforestation, overgrazing, mining, and excessive irrigation can degrade land.

Question 18

What would make an answer from Resources and Development incomplete?

Answer:

An answer is incomplete if it omits the explanation or final implication. Include both: Resources are unevenly distributed and can be depleted or damaged by overuse. Also add: Terrace farming and contour ploughing slow water runoff on slopes.

Resources and Development - Continued

Question 19

Prepare an Assertion-Reason style explanation based on Resources and Development.

Answer:

Assertion: Resources are unevenly distributed and can be depleted or damaged by overuse. Reason: Deforestation, overgrazing, mining, and excessive irrigation can degrade land. Check whether the reason actually explains the assertion before choosing an option.

Question 20

How should you justify an answer from Resources and Development in two clear steps?

Answer:

Step 1: state the concept or event - Resources are unevenly distributed and can be depleted or damaged by overuse. Step 2: support it with the explanation or result - Deforestation, overgrazing, mining, and excessive irrigation can degrade land.

Question 21

What answer structure is suitable for a 3-mark question from Resources and Development?

Answer:

Use three connected points: Resources are unevenly distributed and can be depleted or damaged by overuse. Deforestation, overgrazing, mining, and excessive irrigation can degrade land. Terrace farming and contour ploughing slow water runoff on slopes. Keep the points specific and write them in a logical order.

Question 22

What answer structure is suitable for a 5-mark question from Resources and Development?

Answer:

Give an introduction, develop these key points - Resources are unevenly distributed and can be depleted or damaged by overuse. Deforestation, overgrazing, mining, and excessive irrigation can degrade land. - and close with: Terrace farming and contour ploughing slow water runoff on slopes. Add a diagram, equation, example, or textual reference where relevant.

Question 23

How can the ideas in Resources and Development be applied to a new situation or case study?

Answer:

Identify the relevant principle first: Resources are unevenly distributed and can be depleted or damaged by overuse. Then use the chapter's reasoning to explain the case: Deforestation, overgrazing, mining, and excessive irrigation can degrade land.

Question 24

Which detail from Resources and Development is most likely to earn an extra mark when explained correctly?

Answer:

A useful detail is: Terrace farming and contour ploughing slow water runoff on slopes. Explain it in context instead of using it as an isolated statement.

Resources and Development - Continued

Question 25

Write a brief concluding statement for an answer on Resources and Development.

Answer:

A suitable conclusion is: Terrace farming and contour ploughing slow water runoff on slopes. This conclusion should follow naturally from the explanation rather than introduce a new point.

Question 26

Make a three-point revision note for Resources and Development.

Answer:

1. Resources are unevenly distributed and can be depleted or damaged by overuse. 2. Deforestation, overgrazing, mining, and excessive irrigation can degrade land. 3. Terrace farming and contour ploughing slow water runoff on slopes. Revise these points with the chapter's examples, terms, and practice questions.

Question 27

How would you self-check an answer from Resources and Development before submitting it?

Answer:

Check that you have answered the exact question, used the key idea - Resources are unevenly distributed and can be depleted or damaged by overuse. - and supported it with a reason, example, calculation, or outcome such as: Deforestation, overgrazing, mining, and excessive irrigation can degrade land.

Question 28

Why does Resources and Development remain important for revision?

Answer:

It combines factual recall with explanation and application. The main takeaways are: Resources are unevenly distributed and can be depleted or damaged by overuse. Deforestation, overgrazing, mining, and excessive irrigation can degrade land. Terrace farming and contour ploughing slow water runoff on slopes.

Question 29

Create a final 60-80 word answer plan for a long question from Resources and Development.

Answer:

Opening: Resources are unevenly distributed and can be depleted or damaged by overuse. Development: Deforestation, overgrazing, mining, and excessive irrigation can degrade land. Conclusion: Terrace farming and contour ploughing slow water runoff on slopes. Use complete sentences and include all required evidence, steps, or references.

Question 30

What is one last-minute revision question you should ask yourself about Resources and Development?

Answer:

Ask: 'Can I explain why this is true or important?' A correct self-answer should include: Resources are unevenly distributed and can be depleted or damaged by overuse. and Deforestation, overgrazing, mining, and excessive irrigation can degrade land.
