

# 30 CHAPTERWISE IMPORTANT QUESTIONS

Social Science (087) | CBSE 2026-27

## Water Resources

*Geography | Board-examinable*

30 original revision questions with answers: short-answer, competency, assertion-reason and long-answer practice. Set is based on the current syllabus and official question-paper style; it is not a prediction or an official CBSE paper.

### Question 1

**Why are multipurpose river projects built, and what concerns can they create?**

Answer:

They can provide irrigation, electricity, flood control, and water supply. They may also displace communities, alter river ecosystems, and create conflicts over who receives the benefits.

### Question 2

**Explain rainwater harvesting and give one traditional example from India.**

Answer:

Rainwater harvesting collects and stores rain or directs it into the ground for later use. Rooftop collection into tanks and johads in Rajasthan are examples of local methods.

### Question 3

**Why should water conservation be planned at both household and watershed levels?**

Answer:

Household measures reduce direct waste, while watershed planning manages soil, streams, and recharge across a larger area. Combining them improves water availability and reduces runoff.

### Question 4

**What is the central idea or skill tested in Water Resources?**

Answer:

The central focus is: They can provide irrigation, electricity, flood control, and water supply. This is the starting point for a strong answer from this chapter.

### Question 5

**Write two relevant points for a short answer based on Water Resources.**

Answer:

First point: They can provide irrigation, electricity, flood control, and water supply. Second point: Rainwater harvesting collects and stores rain or directs it into the ground for later use. Link the two points clearly instead of listing them without explanation.

### Question 6

**How does the first key idea in Water Resources lead to an important result or conclusion?**

Answer:

Begin with the key idea: They can provide irrigation, electricity, flood control, and water supply. Then connect it to the result: Rainwater harvesting collects and stores rain or directs it into the ground for later use.

## Water Resources - Continued

### Question 7

**What evidence, calculation, incident or concept best supports the first main idea in Water Resources?**

Answer:

Use this supporting detail: They can provide irrigation, electricity, flood control, and water supply. They may also displace communities, alter river ecosystems, and create conflicts over who receives the benefits. The relevant detail should be stated before giving the final conclusion.

### Question 8

**Explain the importance of the second major idea in Water Resources.**

Answer:

Rainwater harvesting collects and stores rain or directs it into the ground for later use. Rooftop collection into tanks and johads in Rajasthan are examples of local methods. Its importance lies in showing how the chapter develops the topic beyond a simple fact or definition.

### Question 9

**What common mistake should a student avoid while answering a question from Water Resources?**

Answer:

Do not give only a conclusion. Explain the reasoning with a correct detail, such as: Household measures reduce direct waste, while watershed planning manages soil, streams, and recharge across a larger area.

### Question 10

**Compare the first and second important ideas in Water Resources.**

Answer:

The first idea is: They can provide irrigation, electricity, flood control, and water supply. The second idea is: Rainwater harvesting collects and stores rain or directs it into the ground for later use. A complete comparison states both the difference and the connection between them.

### Question 11

**Show a cause-and-effect link from Water Resources.**

Answer:

Cause or starting point: They can provide irrigation, electricity, flood control, and water supply. Effect or outcome: Rainwater harvesting collects and stores rain or directs it into the ground for later use. Use connecting words such as 'therefore', 'as a result', or 'thus'.

### Question 12

**What is the most useful sequence for explaining the main content of Water Resources?**

Answer:

A clear sequence is: They can provide irrigation, electricity, flood control, and water supply. Next, Rainwater harvesting collects and stores rain or directs it into the ground for later use. Finally, Household measures reduce direct waste, while watershed planning manages soil, streams, and recharge across a larger area.

## Water Resources - Continued

### Question 13

**Give a 40-50 word answer outline for an important question from Water Resources.**

Answer:

Start with the direct answer: They can provide irrigation, electricity, flood control, and water supply. Add one supporting point: Rainwater harvesting collects and stores rain or directs it into the ground for later use. End with the outcome or message: Household measures reduce direct waste, while watershed planning manages soil, streams, and recharge across a larger area.

### Question 14

**How should you support an answer from Water Resources with a relevant example or fact?**

Answer:

Use a precise example or explanation: They can provide irrigation, electricity, flood control, and water supply. State the fact, then explain its significance rather than leaving it as a name or date alone.

### Question 15

**How can an examiner see that you understand, rather than memorise, Water Resources?**

Answer:

Connect the idea to its reason or result. For instance: Rainwater harvesting collects and stores rain or directs it into the ground for later use. Then explain why this point matters in the chapter's context.

### Question 16

**State one inference that can be drawn from the main situation or concept in Water Resources.**

Answer:

A sound inference is that household measures reduce direct waste, while watershed planning manages soil, streams, and recharge across a larger area. This inference must be supported by a relevant point from the chapter.

### Question 17

**Frame a short competency-based response using the first two ideas in Water Resources.**

Answer:

Apply the concept by first stating: They can provide irrigation, electricity, flood control, and water supply. Then justify the response with: Rainwater harvesting collects and stores rain or directs it into the ground for later use.

### Question 18

**What would make an answer from Water Resources incomplete?**

Answer:

An answer is incomplete if it omits the explanation or final implication. Include both: They can provide irrigation, electricity, flood control, and water supply. Also add: Household measures reduce direct waste, while watershed planning manages soil, streams, and recharge across a larger area.

## Water Resources - Continued

### Question 19

**Prepare an Assertion-Reason style explanation based on Water Resources.**

Answer:

Assertion: They can provide irrigation, electricity, flood control, and water supply. Reason: Rainwater harvesting collects and stores rain or directs it into the ground for later use. Check whether the reason actually explains the assertion before choosing an option.

### Question 20

**How should you justify an answer from Water Resources in two clear steps?**

Answer:

Step 1: state the concept or event - They can provide irrigation, electricity, flood control, and water supply. Step 2: support it with the explanation or result - Rainwater harvesting collects and stores rain or directs it into the ground for later use.

### Question 21

**What answer structure is suitable for a 3-mark question from Water Resources?**

Answer:

Use three connected points: They can provide irrigation, electricity, flood control, and water supply. Rainwater harvesting collects and stores rain or directs it into the ground for later use. Household measures reduce direct waste, while watershed planning manages soil, streams, and recharge across a larger area. Keep the points specific and write them in a logical order.

### Question 22

**What answer structure is suitable for a 5-mark question from Water Resources?**

Answer:

Give an introduction, develop these key points - They can provide irrigation, electricity, flood control, and water supply. Rainwater harvesting collects and stores rain or directs it into the ground for later use. - and close with: Household measures reduce direct waste, while watershed planning manages soil, streams, and recharge across a larger area. Add a diagram, equation, example, or textual reference where relevant.

### Question 23

**How can the ideas in Water Resources be applied to a new situation or case study?**

Answer:

Identify the relevant principle first: They can provide irrigation, electricity, flood control, and water supply. Then use the chapter's reasoning to explain the case: Rainwater harvesting collects and stores rain or directs it into the ground for later use.

### Question 24

**Which detail from Water Resources is most likely to earn an extra mark when explained correctly?**

Answer:

A useful detail is: Household measures reduce direct waste, while watershed planning manages soil, streams, and recharge across a larger area. Explain it in context instead of using it as an isolated statement.

## Water Resources - Continued

### Question 25

**Write a brief concluding statement for an answer on Water Resources.**

Answer:

A suitable conclusion is: Household measures reduce direct waste, while watershed planning manages soil, streams, and recharge across a larger area. This conclusion should follow naturally from the explanation rather than introduce a new point.

### Question 26

**Make a three-point revision note for Water Resources.**

Answer:

1. They can provide irrigation, electricity, flood control, and water supply. 2. Rainwater harvesting collects and stores rain or directs it into the ground for later use. 3. Household measures reduce direct waste, while watershed planning manages soil, streams, and recharge across a larger area. Revise these points with the chapter's examples, terms, and practice questions.

### Question 27

**How would you self-check an answer from Water Resources before submitting it?**

Answer:

Check that you have answered the exact question, used the key idea - They can provide irrigation, electricity, flood control, and water supply. - and supported it with a reason, example, calculation, or outcome such as: Rainwater harvesting collects and stores rain or directs it into the ground for later use.

### Question 28

**Why does Water Resources remain important for revision?**

Answer:

It combines factual recall with explanation and application. The main takeaways are: They can provide irrigation, electricity, flood control, and water supply. Rainwater harvesting collects and stores rain or directs it into the ground for later use. Household measures reduce direct waste, while watershed planning manages soil, streams, and recharge across a larger area.

### Question 29

**Create a final 60-80 word answer plan for a long question from Water Resources.**

Answer:

Opening: They can provide irrigation, electricity, flood control, and water supply. Development: Rainwater harvesting collects and stores rain or directs it into the ground for later use. Conclusion: Household measures reduce direct waste, while watershed planning manages soil, streams, and recharge across a larger area. Use complete sentences and include all required evidence, steps, or references.

### Question 30

**What is one last-minute revision question you should ask yourself about Water Resources?**

Answer:

Ask: 'Can I explain why this is true or important?' A correct self-answer should include: They can provide irrigation, electricity, flood control, and water supply. and Rainwater harvesting collects and stores rain or directs it into the ground for later use.
